Rapid Access Breast Clinic

Discovering a lump in your breast can be very distressing, and any time spent waiting for a diagnosis can seem like an eternity.

At our Rapid Access Breast Clinic, our compassionate and efficient team of specialists, work together to help diagnose the cause with minimal waiting for results.

Most investigations and results are carried out and discussed with you within the clinic.

Throughout your visit a specialist breast care nurse will be available to provide you with support and information.

How does it work?

- You will have an initial examination with one of our specialist consultant breast surgeons.
- Any further imaging or diagnostic tests necessary to assess the lump are then carried out.
- Scan results are then discussed with you by your consultant.
- If any abnormality is found on the scan, a biopsy will be carried out by the consultant in the clinic.*

* These results will not be available on the same day, another appointment will need to be made at a later date.
